

BAI: BOTS AND ARTIFICIAL INTELLIGENCE

Erasmus+ project

ABOUT

BAI project responds to the imminent need of European workers, who, regardless of their economic sectors and occupations, will see their work environments transformed in the short-medium term, by the emergence of robotics and artificial intelligence.

4TH TRANSNATIONAL PROJECT MEETING

In October, the project partners gathered in the city of Ljubljana, Slovenia, for the final **Transnational project meeting**. The partners addressed the activities and tasks that lay ahead in the last phase of the project. The meeting left everyone with a clear roadmap for the remaining months of the project, as we continue our dedicated work toward a successful conclusion.

PROJECT UPDATES

At the meeting, the partners discussed the **finalisation of the training** being developed as part of IO2, as well as issues related to quality, dissemination and management of the project.

The **English version** of the training is already available on the project website: <https://baiproject.eu/training/>. Here you'll also find introductory videos for each training module, ready for exploration. The partners are working on the **national versions** of the training, which will be ready soon, and then they will be able to start the testing phase with the project's target audience.
